

ETB 536 SEPT VR Computer Lab AV Instructions

- 1) Ensure the Power switch is ON and all systems have power.

Figure 1: ETB 535 AV cabinet control panel

- 2) Confirm that the “HDMI PC” input is selected at the AV cabinet. It will be indicated by a lit green led beside the button.
- 3) Turn on the projector using the Epson remote blue power button. The remote may be in the AV cabinet drawer or on the podium. The projector should automatically select “Computer” input upon powering on. If not, then also press on the “Computer” input button.
- 4) If using the podium/workstation 1 computer, then check that “Input 1 Podium PC” is selected on the HDMI input selector switch on the podium. Pressing the “Select” button will cycle through the different inputs if they are connected. A red led light will note which input number is selected. Note that the workstation in front of the podium cannot be used by a student if it is being used by the instructor to teach the lab.

- 5) If using your own laptop then connect your laptop to the “Laptop” labelled HDMI cable at the podium and check that “Input 2 Laptop” is selected on the input selector switch by pressing the “Select” button. Audio will come through the HDMI cable. Ensure that you select the HDMI audio output on your laptop audio settings.
- 6) To turn off the projector press the blue power button on the remote once and then a second time when prompted by the projector to do so.
- 7) Ensure to put the remote back in the drawer and leave the AV cabinet powered on.
